

This spring it is time for you to start sorting waste at home

Home sorting means you will receive three new waste bins where you can dispose of packaging, food waste and residual waste. All homeowners in Gothenburg will receive bins for home sorting over the coming years.

The bins in our standard home sorting service are designed to meet the needs of most households. You don't need to do anything to receive the standard service.

Bin replacement

In 2027 homeowners in parts of south-west Gothenburg will receive new waste bins. You will receive a notification a week before we come to replace your bins. Before the replacement, please place your current bins in a visible and accessible location.

We will place your new bins in a spot that makes it easy for the waste collection drivers to collect your waste in the future. If we are unable to find a suitable location, *Kretslopp och vatten* will contact you with further instructions on what you need to do.

A lot or a little waste, own compost, or shared bin with a neighbor

If you produce a lot or very little waste, you can choose different bins than those included in the standard service. The same applies if you have your own compost for food waste on your property. You need to register this by **October 4, 2026**, on the website goteborg.se/valjkarl.

If you want to share a bin with your neighbor, you instead need to contact *Kretslopp och vatten's* customer service. The brochure included with this letter provides information about the standard service and the available options.

If you want the standard service, you don't need to make a choice.

More information

You can find more important information about home sorting in the brochure and on the website goteborg.se/hemsortering.

If you have any questions, you can email *Kretslopp och vatten's* customer service at kundservice@kretsloppochvatten.goteborg.se or call 031-368 27 00.
